PRODUCT UPDATE February 2008

## Revolutionary New Technology in Gas Detection

Safety Inc. and ETA Associates are excited to introduce dramatic improvements in Portable and Fixed Gas Detection technology.

- Wireless capabilities
- Higher and lower detectable ranges
- Lower cost of ownership with 5 year warranties on the most common sensors for confined space monitors
- Greater and varied amount of detectable chemicals
- Greater accuracy (as low as parts per trillion)
- Smart sensor technology allowing for easy sensor change out and elimination of initial calibration requirements
- Docking modules for portable units that transmit data, calibrate, charge, and can detect problems with units.
- Gas detection with infrared beams over several hundred feet, indoors or outside.

These are only a few examples of the exciting new developments in technology that we can provide today. Our 30 years of experience will ensure that the solutions offered will be based upon proven results and up-to-date technology.

We provide turnkey solutions including installation, commissioning, calibration, a fully staffed repair center, and expert technical assistance.

Simply call our toll free number if you would like a complimentary evaluation at: **(800) 462-1103** or email us directly at: **[eta@ETAassociates.com](mailto:eta@ETAassociates.com)**.

Get started now by visiting **[www.ETAassociate.com](http://www.ETAassociate.com)** and click on the Technical Resources tab – Application forms – and click on gas detection form to submit a gas detection intake form.

PRODUCT UPDATE February 2008

## Safety Inc. Service Center Flexible On-Site Repair Programs

Our instrument service center provides calibration, repair, and preventive maintenance service for both portable and fixed instruments. Our technicians average over 20 years of experience, and can work on any brand of equipment. Service can be provided at our location or yours.

Examples of instruments we service include: portable and fixed gas detectors, portable and fixed PID's, sound level meters and noise dosimeters, sampling pumps, aerosol/dust monitors, indoor air quality monitors, and anemometers.

## Need to replace your Honeywell / Zellweger System 16?

We offer a Draeger alternative to the discontinued Honeywell/Zellweger System 16 gas detection system. The DraegerGuardian is physically similar to the System 16 cabinet, so it can slide into the same space and use the same sampling hoses. The DraegerGuardian is a sequential sampling system that can measure up to 8 different gases from up to 16 locations for a total of 128 detection points!

The system can be easily customized via the touch screen on the front panel. Many paper tape systems can be replaced by a combination paper tape and electrochemical sensor system-- significantly reducing the cost of replacing tape cassettes.

## Calibration Gas

Safety Inc. calibration gases are much less expensive than gases purchased from instrument manufacturers, and our gas has the same certified accuracy right on the label. Call or e-mail us your requirements and we'll promptly provide a quote.
